Product Description

The ebm-papst A6E630-AD01-01 is a high-performance AC (Alternating Current) axial fan manufactured by ebm-papst, a globally recognized leader in fan and motor technology. This specific model belongs to the A6E630 series and is engineered for applications demanding robust and reliable airflow. As an industrial-grade fan, it plays a crucial role in various ventilation and cooling systems where efficient air movement is essential.

This axial fan typically operates on a 230V AC power supply and features a large impeller diameter, approximately 630mm, enabling it to deliver significant airflow. It boasts an IP54 protection rating, making it capable of operating reliably in environments with moderate dust and water splash exposure. The product commonly incorporates durable ball bearings, ensuring a long service life. While specific performance figures such as airflow volume, speed, and power consumption might vary slightly compared to other models within the same series, the overall performance is designed to meet demanding application requirements.

The ebm-papst A6E630-AD01-01 fan is widely utilized in numerous sectors requiring effective air handling. Typical applications include industrial ventilation systems, large-scale HVAC equipment, commercial and industrial refrigeration units (like condensers), cooling for power electronics, and ventilation in agricultural settings. With its dependable performance and robust construction, it stands as a trusted choice for these diverse applications.
