Product Description

CNDC24B7R Siemens inverter 70 series fan / small blower DC24V 0.2A 4.8W

The CNDC24B7R is a commonly available 120x120x38mm DC axial cooling fan, widely used for its robust performance in various applications like inverters, servers, and general electronics. Powered by 24VDC with 0.2A current and 4.8W power, it utilizes dual ball bearings for extended life. This fan typically offers an airflow of around 99 CFM and a static pressure of 70 Pa at a speed of approximately 2650-3200 RPM, producing a noise level of about 40 dB(A). It generally comes with 3 wires (including a sensor for speed monitoring) and features essential protections like locked rotor and reverse polarity.
