Product Description

The FASCO J238-087-8216 is a specialized AC Motor designed for demanding applications within appliances. It operates on 220V AC power at both 50Hz and 60Hz frequencies, with a current draw of 0.25A. This motor is typically equipped with ball bearings for reliable and continuous operation. Its primary applications include integration into baking ovens and drying boxes, where it drives internal air circulation or other functions critical to the appliance's performance.

J238-087-8216 Motor Parameters

Model: J238-087-8216

Manufacturer: FASCO

Type: Motor

Nominal Voltage: 220 V AC

Frequency: 50/60 Hz

Current Draw: 0.25 A

Bearing Type: Ball Bearing

Application: Primarily used as a motor in baking ovens and drying boxes.

Note: Specific RPM, power consumption, airflow, static pressure, and noise level parameters are not typically available for this model as a standalone unit from general search data.
