Product Description

The KAKU KA2206HA1 is a robust 220x220x60mm AC axial cooling fan, designed for applications requiring powerful and reliable airflow, particularly in industrial settings, electrical cabinets, and control systems. It operates with a dual-voltage/frequency input of 110-120V AC at both 50Hz and 60Hz, drawing 0.72A at 50Hz and 0.61A at 60Hz. This all-metal fan is engineered for durability and often features an IP55 waterproof rating, making it suitable for environments where dust and water splashes are a concern. It prioritizes consistent airflow and has a moderate to high noise level due to its industrial nature. This fan typically connects via 2-wire leads for straightforward AC power input.

Model: KA2206HA1

Manufacturer: KAKU

Type: Axial Fan

Fan Dimensions: 220mm x 220mm x 60mm

Rated Voltage: AC 110-120V

Frequency: 50/60Hz

Rated Current: 0.72A (at 50Hz) / 0.61A (at 60Hz)

Rated Power: 70-80W

Maximum Rotational Speed: 2800 - 3300 RPM

Maximum Airflow: High

Maximum Static Pressure: Designed for effective airflow against resistance

Noise Level: Moderate to High

Bearing Type: Ball Bearing

Expected Lifespan: Long lifespan

Connector: 2-Wire Leads

Special Features: IP55 Waterproof Rating
