Product Description

Magik differential pressure controller MGD35T delay MGD504 no delay cold storage oil pressure differential controller

Model: MGD35T delay oil differential pressure (0.5-4)

MGD504 no delay oil differential pressure (0.5-3.5)

[Product Name] MGP Differential Pressure Controller, time-delay, no time-delay

MGP series delay differential pressure controller is a protective controller, it can effectively protect the compressor oil pressure always maintain a high-pressure state, so as to avoid damage to the compressor crankshaft due to lack of oil; if the oil pressure is not in the specified time to reach the set value of the differential pressure, the controller instantly cuts off the power supply and stops the compressor work.

Differential pressure control is adjustable.

There are models to control the amount of condensate through the model and control the compressor oil pressure protection models oil pressure differential controller refrigeration screw compressor air conditioning oil level switch central air-conditioning water pressure differential MAGIC Brand

Additional Information

sort by color: MGD35T delay, MGD504 has no delay
