Product Description

USB interface: used to connect to computer

8-pin round head: used in all Sanling FX series

25-pin parallel port: used to connect to the full range of A-series PLCs (it seems that the same model on the market is also USB-SC09, which seems to be a few yuan cheaper. One is to omit this big head. You can compare it with the actual picture for convenience. You know, there is also the fact that the materials used are not industrial grade. All the materials used in our store are industrial grade, standardized production in the factory, and are not primary products hand-welded by private individual units!)

Mitsubishi programming cable USB-SC09 with big head FX and A series PLC programming cable data cable download cable
