Product Description

Shell and tube condenser, water-cooled condenser, special water cannon for cold storage air conditioning

[Product name] Shell and tube water-cooled condenser

□Features□

- Strictly follow the production and acceptance of "Pressure Vessels for Refrigeration Devices" to ensure product quality
- Using high-efficiency externally threaded copper tubes, high heat exchange efficiency, small size and light weight
- The air tightness test is conducted under 2.4MPa air pressure, and the product is of qualified quality before leaving the factory.
- The pressure vessel is equipped with a "safety soluble plug". When the temperature of the liquid in the pipe reaches a certain value, it will automatically melt and reduce the pressure to ensure safety.
- The end cover of the condenser is equipped with a drainage device to prevent the water in the tube from freezing and breaking the heat exchange tube due to low ambient temperature in winter.

□Application Scope□

- l Refrigeration industry and cold storage projects;
- l Agriculture, food, restaurant, chemical industry;
- l Equipped with central air conditioning host equipment.

Scope of application: air conditioning and refrigeration, plumbing hardware, hot and cold water supply, air energy water heaters, engineering machinery, refrigeration equipment units, etc.

Additional Information

sort by color: 3HP, 5HP, 8HP, 10HP, 15HP (Φ219), 15HP (Φ273), 20HP (Φ273), 25HP (Φ273), 30HP, 35HP, 40HP, 50HP, 60HP, 70HP, 80HP, 100HP, 120HP, Water cooling end cover Φ159, Water cooling end cover Φ219, Water cooling end cover Φ273, Water cooling end cover Φ325, Water cooling end cover Φ377, If you need to bring a certificate, please add this photo
