Product Description

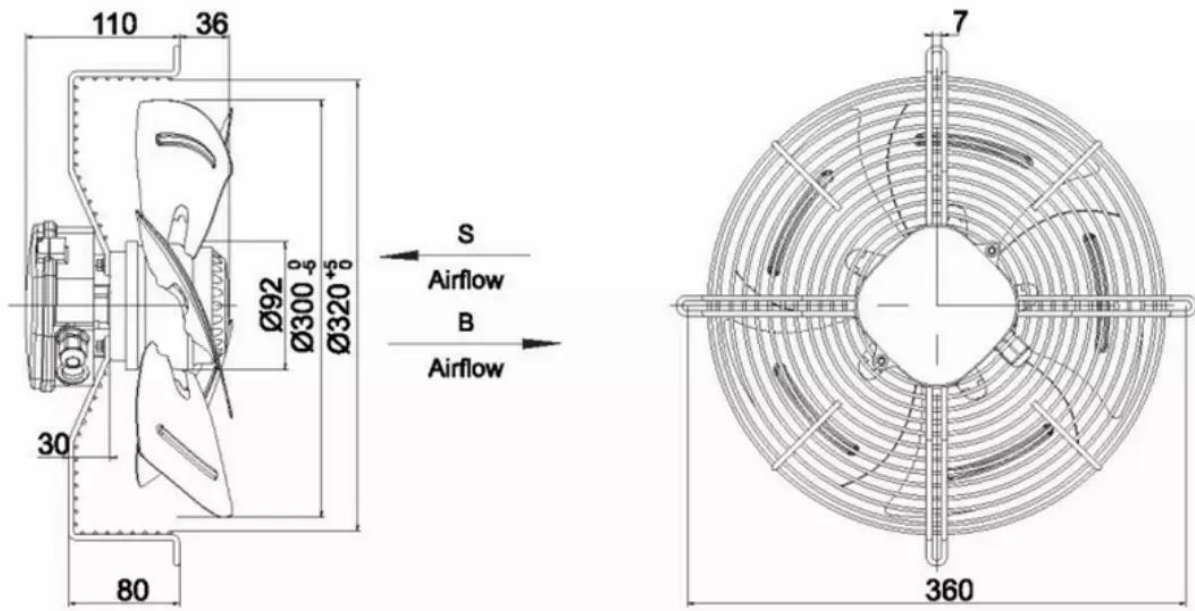

The YWF4E-300S WeiGuang is a high-performance low-light imaging device designed for extreme weak-light environments. It utilizes advanced micro-light enhancement technology to capture clear and detailed images under minimal illumination, making it ideal for nighttime surveillance, field exploration, security patrols, and other low-light scenarios. Featuring high sensitivity, low noise, and a wide dynamic range, the device supports high-definition resolution and real-time transmission, ensuring stable and reliable visual support even in near-total darkness. Its compact and lightweight design enhances portability and ease of installation, positioning it as an essential optical observation tool for professional and specialized applications.
